Neeraj Dalal

AI-native Product Engineer with 6+ years shipping production SaaS and **AI agent infrastructure** in full-stack TypeScript. At LightWork AI, I build an AI-powered property-management platform across the full stack, from the UI to the infrastructure. On my own time I build **ZeroStarter**, an open-source type-safe SaaS starter, and on top of it an **agent factory** where Claude Code sessions ship software. Author of 250+ repositories, with 1,070+ GitHub stars and 30,000+ weekly npm downloads.

New Delhi, India (open to relocate) | nrjdalal.dev@gmail.com | github.com/nrjdalal | linkedin.com/in/nrjdalal

Core Strengths

- **Open-source agent infrastructure**: built ZeroStarter, a type-safe SaaS starter that AI agents can operate, and on its foundation Playground, a multi-agent system where Claude Code sessions plan, build, review and ship software under policies I define
- **AI product engineering**: LLM workflows taken from prototype to production, and agent tooling that takes structured actions for users
- **Migrations without regressions**: a framework re-platform, a full redesign shipped behind flags and a move into a new codebase, each landed on a live product with no feature freeze
- **Build and release automation**: CI gates, test toolchains and promotion between environments without hand-made pull requests
- **Security by default**: authentication and access control built in and rolled out to every account of a live product

Experience

Product Engineer · LightWork AI · London, UK (Remote) · Jun 2025 – Present

- Shipped product **end to end for a year and a half**, across frontend, backend, dev tooling, migrations, security, infrastructure, and AI agent tooling, on an AI-powered property-management platform that ships daily.
- Made two-step sign-in **mandatory for every account in ten days**, building both the server side and the UI: email codes, Google sign-in, trusted devices, a real password policy, lockout, and per-organisation controls, rolled out to every existing account.
- Made the team's **test suites about 5x faster** and cold builds about 4x faster by moving the build and test toolchain to a faster compiler over one weekend, unasked, and turned a flaky out-of-memory coverage job into a stable one in under half the time.
- Automated **the path to production** and the team's dev tooling: changes labelled by area, promotion between environments without hand-made pull requests, a faster monorepo build, CI results in chat, and a same-day fix that unblocked every change in the repo.
- Built **AI agent tooling** that lets the product take structured actions on behalf of users.
- Led the web app's migrations: a framework re-platform in my first month, a full redesign shipped to every page behind flags with no feature freeze, the old UI retired in a single cutover with **zero regressions**, and the move into a new codebase.
- Took the product from **one language to four in two days**, with an automated parity check so no language can drift and no growth in bundle size.

Creator & Maintainer · Open source (ZeroStarter, Playground) · Remote · Nov 2025 – Present

- Built ZeroStarter, a **type-safe SaaS starter**: shared types from database to UI, one database schema, automated publishing, and an agent sign-in so AI agents can operate the app.
- Built Playground as a ZeroStarter fork: an **agent factory** on Claude Code, skills, MCP tools and the Claude Agent SDK, where sessions plan, build, review, and merge software from a live dashboard, with policy-driven guardrails.
- Both are public on GitHub; ZeroStarter installs with one command and stands at **64★**.

Product Engineer · Stealth AI Startup · Oct 2023 – May 2025

- Early product engineer building a new AI product from **0 to 1** across the full stack.
- Built frontend and backend features **end to end**, from product UI through APIs, data, and deployment.
- Integrated **LLM workflows** into the core experience, turning AI prototypes into production capabilities.
- Helped define the product's **early technical foundation** as part of a small engineering team.

Senior Developer · Warewe · New Delhi · Sep 2022 – Sep 2023

- Built Hetrolinks, a SaaS for repairing broken Amazon affiliate links: engineered AWS Lambda as rotating proxies to bypass captcha for **~90% proxy-cost savings**, plus a scraper covering 2,000+ pages in 5-10 min.
- Re-architected the backend from Python to Node.js on AWS Lambda for **~50% better performance**, with queueing and rate limiting for concurrent jobs.
- Built **SerpWe end to end**: ran Puppeteer on Lambda over thousands of Google results, clustered keywords by SERP overlap to infer search intent, and wrote 100% of the Next.js admin dashboard.

Full-Stack Developer · VeroXyle · New Delhi · May 2020 – Aug 2022

- Delivered and maintained **10+ client-facing web projects** across frontend and backend.
- Automated CI/CD pipelines (**~40% faster deploys**) and built nginx/Certbot deploy and server-management tooling that cut infra costs ~20%.
- Standardized API patterns across projects, improving development turnaround **~30%**.

Intern · SSIM Dwarka · New Delhi · Nov 2019 – Apr 2020

- Built, deployed, and managed the website for the institute.

Selected Projects

250+ repositories, 1,070+ GitHub stars on the public ones, and 30,000+ weekly npm downloads across 40+ packages. The strongest:

- **gitpick (326★)** - TypeScript, Bun. A zero-dependency degit replacement that clones any file, folder, or branch by URL: **345,000 npm downloads in the last year**; used by Storybook, TanStack Router, ElectricSQL, and Alchemy.
- **tailwind-animate** - TypeScript. A Tailwind CSS v4 animation plugin replacing tailwindcss-animate: **24,000 weekly npm downloads**.
- **rdt.li (252★)** - Next.js, Drizzle, Postgres. A self-hostable, open-source URL shortener with analytics, charts, and **one-click deploy**.
- **shadcn-ui snippets (117★)** - VS Code, Bun. An editor extension for shadcn/ui snippets, **13,500+ installs** across its two Marketplace listings, built via a Markdown-to-snippet pipeline.
- **smart-registry (27★)** - TypeScript. A **zero-config** shadcn registry builder that auto-detects files and dependencies, removing most registry.json boilerplate.
- **karabiner-human-config (51★)** - TypeScript. A human-readable Karabiner config compiler, **listed among the official Karabiner-Elements generators**.

Skills

- AI & agents: **Claude Code** (hooks, skills, AGENTS.md), **Claude Agent SDK**, **MCP** servers (GitHub, Linear, Slack, Notion, Datadog, PostHog), Vercel AI SDK, **agent-browser** and agent-desktop automation, multi-session orchestration, LLM-as-judge review gates
- Languages & frameworks: **TypeScript**, JavaScript, Python, SQL, Bash; **React**, **Next.js** (App Router), **Hono** (RPC, OpenAPI with Scalar), **Bun**, Node.js, **Tailwind CSS**, shadcn/ui, Base UI, TanStack Query/Form/Table, Zod, Streamdown, Fumadocs, MDX, WebSockets
- Data & auth: **PostgreSQL**, **Drizzle ORM**, **Redis**, **Better Auth**, OAuth and two-step sign-in flows, rate limiting, queues
- Infra & tooling: **Docker**, **Vercel**, AWS Lambda, **GitHub Actions** (OIDC npm publishing), **Turborepo**, Bun workspaces, tsdown, oxlint/oxfmt, lefthook, conventional commits, automated changelogs, bun test with browser-driven end-to-end tests, PostHog

Education

B.Tech, Electronics & Communication Engineering

Delhi Technical Campus (GGSIPU), New Delhi · 2016–2020
